

RESCUE HOIST SYSTEM SLG-300

SALES PROMOTION

This sales bulletin provides our customers a discounted pricing offer to upgrade their helicopters with Rescue Hoist system SLG-300 set.

INTRODUCTION

The rescue hoist system SLG-300 consists of airborne boom 8MH-9636-000 and electric winch which are mounted inside the helicopter near the sliding cargo cabin door.

Such combination ensures the simultaneous lifting of two persons; at the same time, with the help of booms electrical turn mechanism both persons can be drawn inside the helicopter without major efforts.

The boom and the hoist are operated by a rescue team operator using portable control console. This console incorporates all control needed to operate the system: direction and speed of the hoist, extraction/retraction of the boom, length of the rope. The control is easily operated by one hand.

If needed or in case of emergency, pilots can control the hoist system; pilots control has the priority over hoist operator's signals. Control console has additional intercom button, so hoist operator can communicate with pilots and other rescue team members.

MAIN FEATURES:

- Capability 300 kg (two persons);
- Cable length 60 m;
- Internal installation on the airborne boom.

TECHNICAL DATA:

Performance:

- Rated load: 661 lbs (300 kg)
